Education

The University of British Columbia

Sep 2021 – May 2026

Bachelor of Applied Science in **Integrated Engineering** (Computer & Electrical Engineering)

Vancouver, BC

- **Academic Awards:** Distinction; Outstanding International Student Scholarship; Dean's Honor List
- **Engineering Awards:** Top 3 @ nwHacks 2024; 1st Place @ CSME 2025 National Design Competition; Runner-Up and Biggest Pivot Since Pitch @ 2024 Canada Tech Futures Challenge; 3rd Place @ 2024 AEAC National UAS Competition
- **Courses:** Systems Software, Computer Networking, Cybersecurity, Software Design, AI/ML, Blockchain

Technical Skills

Languages: Python, Go, TypeScript, JavaScript, C#, C, Bash, SQL

Frameworks: FastAPI, Flask, Node.js, React, Vue.js, REST APIs, MongoDB, Elasticsearch, Pytest, Selenium, PyTorch, Scikit-learn, Pandas, NumPy, Claude API

Cloud/SRE/DevOps: GCP, AWS, Terraform, Docker, Kubernetes, Helm, GitHub Actions, ArgoCD, Grafana, CI/CD

Systems/Other: Linux, Networking

Technical Work Experience

The University of British Columbia

Jan 2026 – May 2026

Machine Learning Privacy Research Assistant

Vancouver, BC

- Built a PyTorch training pipeline for 256 shadow models on CIFAR-10 dataset, automating dataset partitioning, training, and checkpointing to produce the attack corpus for membership inference experiments
- Implemented membership inference attacks against the resulting models and improved detection at low false-positive rates using statistical scoring and multivariate feature analysis

Samsung Electronics

Jan 2025 – Aug 2025

Cloud DevOps Engineer Co-op

Vancouver, BC

- Raised infrastructure-as-code coverage and improved observability across 8+ GCP projects by building a Python Terraform discovery, drift detection, and import-generation pipeline for 300+ unmanaged resources
- Supported production big-data platform operations and resource provisioning using Terraform; advised 100+ developers across 4+ global sites on IAM, networking, Kubernetes, and CI/CD best practices
- Led incident response and authored RCAs for BigQuery slot starvation, Grafana observability failures, CI/CD regressions, IAM drift, and SQL bottlenecks, partnering with platform and engineering teams to resolve issues
- Reduced Docker image size from 2GB to 55MB via multi-stage builds, cutting CI runtime by 65%
- Engineered Kubernetes deployments for services such as Elasticsearch using Helm, ArgoCD and GitOps principles

Samsung Electronics

May 2024 – Dec 2024

Technical Support Engineer (Tools & Documentation) Co-op

Vancouver, BC

- Published 60+ Samsung Knox B2B knowledge base articles translating complex technical features for external partner audiences; nominated for UBC APSC Co-op Student of the Year 2024
- Built a TypeScript VSCode extension with AI suggestions, broken-link detection, Markdown linting, and style enforcement, improving quality across 100+ articles
- Developed a Python automation tool using Selenium, Pandas, and NLTK to evaluate B2B partner requests, reducing review time from 15 minutes to 5 seconds
- Implemented frontend & backend components for a Selenium based test analytics platform using Vue.js, Flask, Docker, AWS DocumentDB, Elasticsearch, and REST APIs

Technical Projects

Terraform Service Bot | Go, Terraform, Claude API

July 2026 – Present

- Building a repo agnostic service bot that turns plain English infrastructure requests into convention-faithful pull requests through surgical HCL edits using an intermediate representation
- Training & evaluating a locally fine-tuned 2B parameter model to ensure infrastructure context remains local

HAVEN-Smart Tool Loaning System | FastAPI, React, Docker, Tailscale, Klipper

Sep 2025 – Apr 2026

- Owned software and electrical system design for a self-serve tool loaning kiosk built for an engineering cohort of 200+, spanning React kiosk UI, FastAPI backend, Raspberry Pi control, Klipper macros, and PCB design
- Created Docker containers and deployed via a self-hosted CI/CD runner with Tailscale for remote access, keeping dependency isolation and rollbacks manageable

Medical Waste Management System | Top 3 @ nwHacks | Node.js, MongoDB, Auth0, MappedIn

Jan 2024

- Built a hospital logistics platform with indoor mapping, dashboards, and biomedical waste workflow optimization
